Doctors warn austerity is damaging patients' health

GPs in deprived areas see sharp rise in social issues

STEPHEN NAYSMITH

SOCIETY EDITOR

GPs working in the most deprived communities in Scotland have warned of increasing levels of mental and physical health problems among patients affected by

representing 360 doctors in 100 practices, said job losses, welfare reform and cuts to social services were all affecting the health of majority of them win." their patients.

2009. It is backed financially by the Scottish Government.

In a new report, the group says austerity measures are causing increased distress and poverty among their patients, and an increased workload for family doctors.

The GPs add that the growing impact of benefit cuts mean much of their time is taken up with social issues rather than patients' underlying health

In February, the group surveyed members to ask about their experiences of austerity. Doctors responded that patients were suffering deteriorating mental health, and also physical problems.

The report says: "GPs report less time to deal with physical problems, as these are no longer a priority for the patient."

concern for many GPs, because they felt patients were wrongly being declared fit to work in medical tests on behalf of the for work was particularly

She said: "So may people who are clearly unfit for work are being assessed as capable of work after a cursory assessment.

"We see people with uncontrolled chronic conditions. who are physically quite disabled The Deep End group of GPs, or have significant mental health problems. The system seems to maximise their distress.

"The majority appeal and the

The report draws attention to The 100 Deep End group of the impact of cuts in other public general practices that serves the services, such as education, social most socio-economically deprived work and addiction support. Dr areas of the country was set up in Craig added: "The minimum pricing of alcohol is a great thing, but addiction services are falling by the wayside. Austerity measures also affect children, but social work only have the resources to get involved in the most disturbed and difficult situations."

Dr Graham Watt, professor of General Practice at Glasgow

So many people who are clearly unfit for work are being assessed as capable of work after a cursory assessment

University, helped compile the report. He said: "These GPs are absolutely on the front line. Many of them are frustrated that they can see all this happening but Benefit changes were also a people don't know about it."

Aberdeen South MP Anne Begg chairs the work and pensions select committee at Westminster, and has written to

worry that her mental health will deteriorate. Her benefits were stopped. She was diagnosed with type 2 diabetes ... instead of working with her setting goals for her diabetes I wrote a letter for an appeal and referred her to the benefit

Another reports seeing a former labourer in his early fifties who was out of work due to osteoarthritis. His disability allowance had been cut and he was unable to afford his mortgage, "This patient's mental health problems have escalated and he is being seen

psychologically cope with retraining."

A third case reads simply: "Eastern European pregnant lady with no money or food. Living in squalor with approximately eight other adults. No money available

Large city hospitals 'are hubs for MRSA'

HOSPITALS in large cities act as "breeding grounds" for the superbug MRSA, which then spreads to smaller regional hospitals and health centres, according to a new study.

Researchers from Edinburgh University found evidence that shows for the first time how the superbug spreads between different hospitals throughout the

The study involved looking at the genetic make-up of more than 80 variants of a major clone of MRSA found in hospitals.

Scientists were able to determine the entire genetic code of MRSA bacteria taken from infected patients.

They then identified mutations in the bug that led to the emergence of new MRSA variants and traced their spread around the country.

Dr Ross Fitzgerald, of The Roslin Institute at Edinburgh University, who led the study, said: "We found that variants of MRSA circulating in regional hospitals probably originated in large city hospitals.

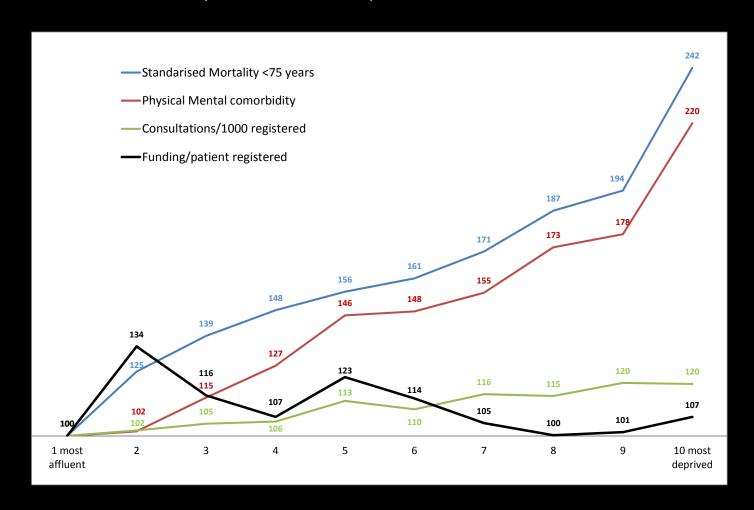

"The high levels of patient traffic in large hospitals means they act as a hub for transmission between patients, who may then be transferred or treated in regional hospitals."
