

## **HSA Profile:** Bennington

Period: July 2015 - June 2016 Profile Type: Pediatric (1-17 Years)

Welcome to the Blueprint Hospital
Service Area (HSA) Profile from the
Blueprint for Health, a state-led
initiative transforming the way that
health care and comprehensive health
services are delivered in Vermont. The
Blueprint is leading a transition to an
environment where all Vermonters
have access to a continuum of
seamless, effective, and preventive
health services.

Blueprint HSA Profiles are based primarily on data from Vermont's all-payer claims database, the Vermont Health Care Uniform Reporting and Evaluation System (VHCURES). Data include all covered commercial and Full Medicaid members attributed to Blueprint practices that began participating on or before June 30, 2016.

The HSA Profile for the adult population covers members ages 18 years and older; pediatric profiles cover members between the ages of 1 and 17 years. Practices have been rolled up to the HSA level.

Utilization and expenditure rates presented in these profiles have been risk adjusted for demographic and health status differences among the reported populations.

This reporting includes only members with a visit to a primary care physician, as identified in VHCURES claims data, during the current reporting year or the prior year. Rates for HSAs reporting fewer than 30 members for a measure are not presented in alignment with NCQA HEDIS guidelines.

The HSA Profile includes Accountable Care Organization (ACO) core measures based on VHCURES and the Blueprint clinical data registry.

#### **Demographics & Health Status**

|                                    | HSA   | Statewide |
|------------------------------------|-------|-----------|
| Average Members                    | 4,375 | 70,813    |
| Average Age                        | 9.0   | 9.0       |
| % Female                           | 48.7  | 49.0      |
| % Medicaid                         | 71.7  | 60.3      |
| % with Selected Chronic Conditions | 19.3  | 15.1      |
| Health Status (CRG)                |       |           |
| % Healthy                          | 77.5  | 81.3      |
| % Acute or Minor Chronic           | 11.8  | 11.0      |
| % Moderate Chronic                 | 9.0   | 6.6       |
| % Significant Chronic              | 1.6   | 1.0       |
| % Cancer or Catastrophic           | 0.1   | 0.2       |

**Table 1:** This table provides comparative information on the demographics and health status of the HSA and of the state as a whole. Included measures reflect the types of information used to generate adjusted rates: age, gender, and health status.

Average Members serves as this table's denominator and adjusts for partial lengths of enrollment during the year. In addition, special attention has been given to adjusting for Medicaid. This includes adjustment for each member's enrollment in Medicaid, the member's practice's percentage of membership that is Medicaid, and the degree to which the member required special Medicaid services that are not found in commercial populations (e.g., day treatment, residential treatment, case management, school-based services, and transportation).

The % with Selected Chronic Conditions measure indicates the proportion of members identified through the claims data as having one or more of eight selected chronic conditions: asthma, chronic obstructive pulmonary disease, congestive heart failure, coronary heart disease, hypertension, diabetes, depression, and attention deficit disorder.

The Health Status (CRG) measure aggregates 3M™ Clinical Risk Grouper (CRG) classifications for the year for the purpose of generating adjusted rates. Aggregated risk classification groups include: Healthy, Acute (e.g., ear, nose, throat infection) or Minor Chronic (e.g., minor chronic joint pain), Moderate Chronic (e.g., diabetes), Significant Chronic (e.g., diabetes and CHF), and Cancer (e.g., breast cancer, colorectal cancer) or Catastrophic (e.g., HIV, muscular dystrophy, cystic fibrosis). CRG identification was enhanced using additional diagnostic and pharmacy information for RY2016 reporting, resulting in fewer healthy members and more members with chronic and other conditions.

## **HSA Profile:** Bennington

Period: July 2015 - June 2016 Profile Type: Pediatric (1-17 Years)

#### **Total Expenditures per Capita**

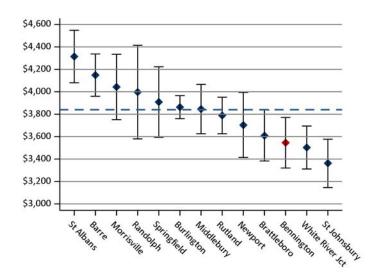

Figure 1: Presents annual risk-adjusted rates, including 95% confidence intervals, with expenditures capped statewide for outlier patients. Expenditures include both plan payments and member out-of-pocket payments (i.e., copay, coinsurance, and deductible). The blue dashed line indicates the statewide average.

#### **Total Expenditures per Capita by Major Category**

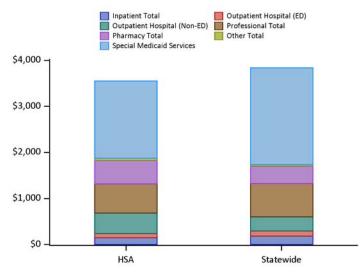

Figure 2: Presents annual risk-adjusted rates for the major components of cost (as shown in Figure 1) with expenditures capped statewide for outlier patients. Some services provided by Medicaid (e.g., case management, transportation) are reported separately as Special Medicaid Services (SMS).

#### **Total Expenditures per Capita (Excluding SMS)**

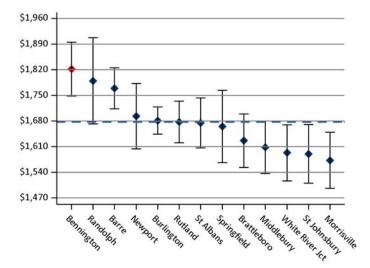

Figure 3: Presents annual risk-adjusted rates, including 95% confidence intervals, with expenditures capped statewide for outlier patients. Expenditures include both plan payments and member out-of-pocket payments (i.e., copay, coinsurance, and deductible) and exclude Special Medicaid Services. The blue dashed line indicates the statewide average.

#### Total Resource Use Index (RUI) (Excluding SMS)

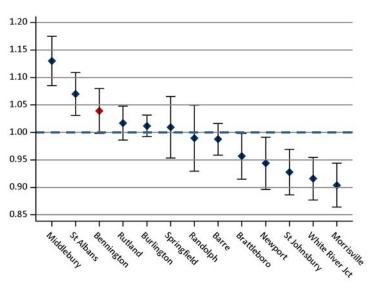

Figure 4: Presents annual risk-adjusted rates, including 95% confidence intervals. Since price per service varies widely, a measure of expenditures based on resource use — Total Resource Use Index (RUI) — is included. RUI reflects an aggregated capped cost based on utilization and intensity of services across major components of care and excludes Special Medicaid Services. The HSAs are indexed to the statewide average (1.00), which is indicated by the blue dashed line.

Period: July 2015 - June 2016 Profile Type: Pediatric (1-17 Years)

#### Annual Total Expenditures per Capita vs. Resource Use Index (RUI)

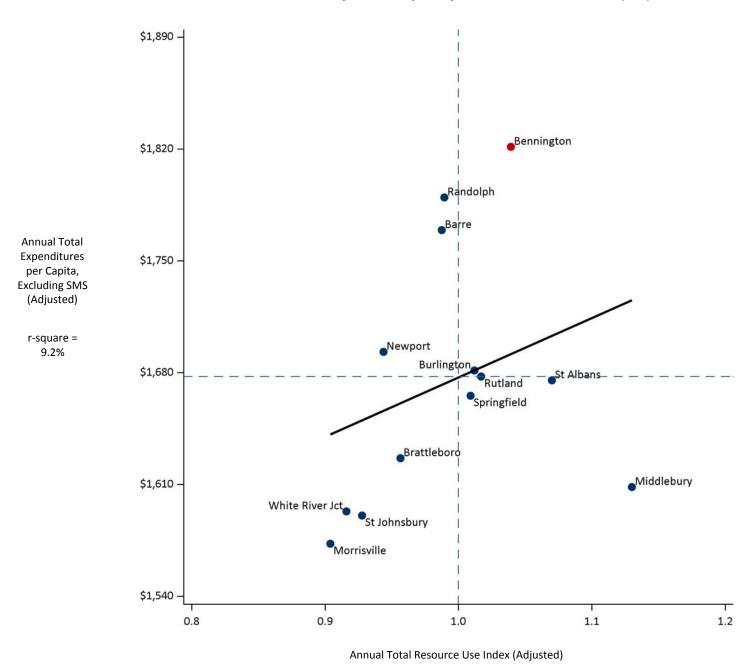

Figure 5: This graphic demonstrates the relationship between risk-adjusted expenditures excluding SMS and risk-adjusted utilization for each of the HSAs in Vermont. This graphic illustrates the HSA's risk-adjusted rate (i.e., the red dot) compared to those of all other HSAs statewide (i.e., the blue dots). The dashed lines show the average expenditures per capita and average Resource Use Index statewide (i.e., 1.0). HSAs with higher expenditures and utilization are in the upper right-hand quadrant while HSAs with lower expenditures and utilization are in the lower left-hand quadrant. An RUI value greater than 1.0 indicates higher than average utilization; conversely, a value lower than 1.0 indicates lower than average utilization. A trend line has been included in the graphic, which demonstrates that, in general, HSAs with higher risk-adjusted utilization had higher risk-adjusted expenditures.

## **HSA Profile:** Bennington

Period: July 2015 - June 2016 Profile Type: Pediatric (1-17 Years)

#### **Inpatient Discharges**

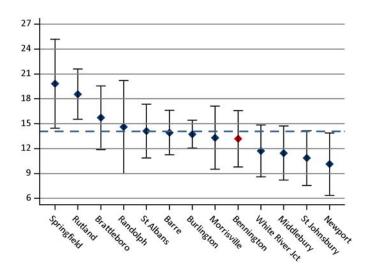

Figure 6: Presents annual risk-adjusted rates, including 95% confidence intervals, of inpatient discharges per 1,000 members. Additional detail measures for inpatient utilization — Inpatient Days, and Preventive Quality Indicators — can be found in Table 4. The blue dashed line indicates the statewide average.

#### **Outpatient ED Visits**

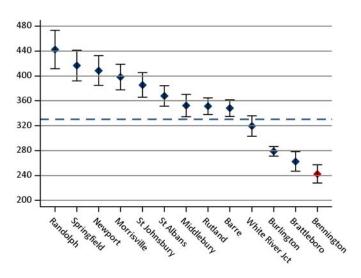

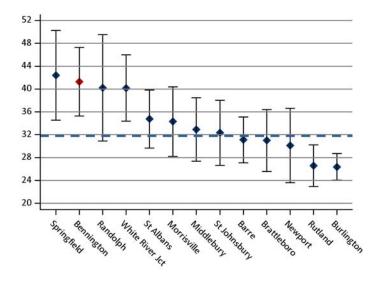

Figure 7: Presents annual risk-adjusted rates, including 95% confidence intervals, of outpatient emergency department (ED) visits per 1,000 members. An additional detail measure — Outpatient Potentially Avoidable ED Visits — can be found in Table 4. The blue dashed line indicates the statewide average.

#### **Advanced Imaging (MRIs, CT Scans)**

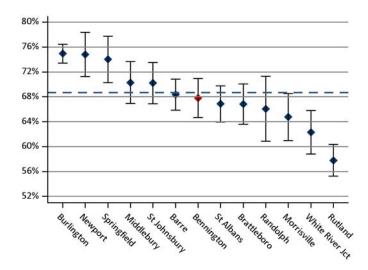

**Figure 8:** Presents annual risk-adjusted rates, including 95% confidence intervals, of advanced imaging diagnostic tests (i.e., magnetic resonance imagings (MRIs) and computed tomography (CT) scans) per 1,000 members. The blue dashed line indicates the statewide average.

## **HSA Profile:** Bennington

Period: July 2015 - June 2016 Profile Type: Pediatric (1-17 Years)

#### **Well-Child Visits**

**Figure 9:** Presents the proportion, including 95% confidence intervals, of members, ages 3–6 years, who received one or more well-child visits during the measurement year. The blue dashed line indicates the statewide average.

#### **Adolescent Well-Care Visits (Core-2)**

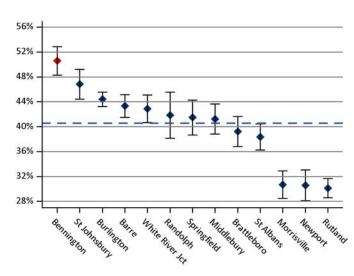

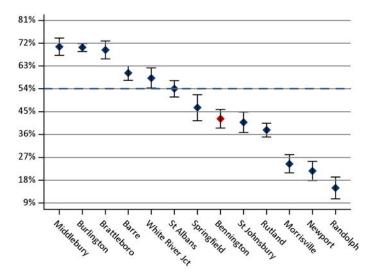

Figure 10: Presents the proportion, including 95% confidence intervals, of members, ages 12–21 years, who received one or more well-care visits with a primary care practitioner or OB/GYN during the measurement year. (Note that, due to the age ranges for this ACO measure, members above the age of 17 years, not typically represented in pediatric profiles, are included in these rates.) The blue dashed line indicates the statewide average.

#### **Developmental Screening in First 3 Years of Life (Core-8)**

**Figure 11:** Presents the proportion, including 95% confidence intervals, of continuously enrolled children screened for risk of developmental, behavioral, and social delays using a standardized screening tool in each of the first three years of life. The blue dashed line indicates the statewide average.

#### Chlamydia Screening in Women (Core-7)

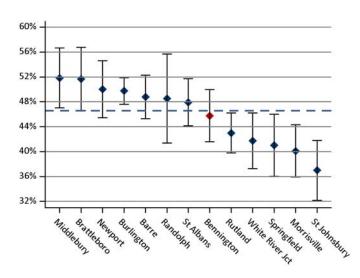

Figure 12: Presents the proportion, including 95% confidence intervals, of continuously enrolled females, ages 16–24 years, who were identified as sexually active and who had at least one test for chlamydia during the measurement year. (Note that, due to the age ranges for this ACO measure, females above the age of 17 years, not typically represented in pediatric profiles, are included in these rates.) The blue dashed line indicates the statewide average.

## **HSA Profile:** Bennington

Period: July 2015 - June 2016 Profile Type: Pediatric (1-17 Years)

## **Appropriate Testing for Pharyngitis (Core-13)**

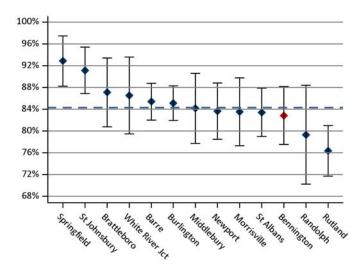

Figure 13: Presents the proportion, including 95% confidence intervals, of children, ages 2–17 years, who were diagnosed with pharyngitis, dispensed an antibiotic, and received a Group A streptococcus (strep) test for the episode. A higher rate represents appropriate testing for children with pharyngitis. The blue dashed line indicates the statewide average.

### **Appropriate Treatment for Upper Respiratory Infection**

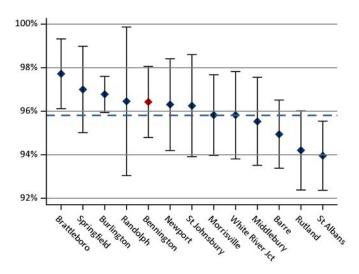

Figure 14: Presents the proportion, including 95% confidence intervals, of children, ages 1–17 years, who were diagnosed with upper respiratory infection (URI) and were not dispensed an antibiotic prescription. A higher rate indicates appropriate treatment of children with URI (i.e., the proportion for whom antibiotics were not prescribed). The blue dashed line indicates the statewide average.

Period: July 2015 - June 2016 Profile Type: Pediatric (1-17 Years)

The following tables provide greater detail on the annual rates presented in the preceding figures.

Table 2. Expenditure Measures (Adjusted)

| Magazira                                   |                 | HSA     |         |                 | Statewide |         |  |

|---------------|--|---|---|-----------------------------|--|
| Core-1        |  | Plan All-Cause<br>Readmissions  | NQF #1768, HEDIS<br>measure   | Adult                       | For members 18 years and older, the number of acute inpatient stays during the measurement year that were followed by an acute readmission for any diagnosis within 30 days.   |
| Core-2        |  | Adolescent Well-Care<br>Visit   | HEDIS measure   | Pediatric                   | The percentage of members 12-21 years who had at least one comprehensive well-care visit with a PCP or OB/GYN during the measurement year.   |
| Core-3        | MSSP-29  | Ischemic Vascular<br>Disease (IVD):<br>Complete Lipid Panel<br>(Screening Only)   | NQF #0075, NCQA   | Adult                       | The percentage of members 18-75 years who were discharged alive for acute myocardial infarction, coronary artery bypass grafting, or percutaneous coronary intervention in the year prior to the measurement year or who had a diagnosis of Ischemic Vascular Disease during the measurement year and one year prior, who had LDL-C screening.   |
| Core-4        |  | Follow-up after<br>Hospitalization for<br>Mental Illness, 7 Day   | NQF #0576, HEDIS<br>measure   | Adult                       | The percentage of discharges for members 6 years and older who were hospitalized for treatment of selected mental illness diagnoses and who had an outpatient visit, an intensive outpatient encounter, or partial hospitalization with a mental health practitioner.  |
| Core-5        |  | Initiation & Engagement of Alcohol and Other Drug Dependence Treatment (a) Initiation, (b) Engagement                     | NQF #0004, HEDIS<br>measure   | Adult                       | (a) The percentage of adolescent and adult members with a new episode of alcohol or other drug (AOD) dependence who received initiation of AOD treatment within 14 days. (b) The percentage of adolescent and adult members with a new episode of alcohol or other drug (AOD) dependence who initiated treatment and had two additional services with a diagnosis of AOD within 30 days of the initiation visit.   |
| Core-6        |  | Avoidance of<br>Antibiotic Treatment<br>for Adults with Acute<br>Bronchitis   | NQF #0058, HEDIS<br>measure   | Adult                       | The percentage of adults 18-64 years with a diagnosis of acute bronchitis who were not dispensed an antibiotic.  |
| Core-7        |  | Chlamydia Screening in Women  | NQF #0033, HEDIS<br>measure   | Adult and Pediatric         | The percentage of women 16-24 years who were identified as sexually active and who had at least one test for chlamydia during the measurement period.  |
| Core-8        |  | Developmental<br>Screening in the First<br>Three Years of Life  | NQF #1448   | Pediatric                   | The percentage of children screened for risk of developmental, behavioral, and social delays using a standardized screening tool in the 12 months preceding their first, second, or third birthday.  |
| Core-10       | MSSP-9   | Ambulatory Sensitive<br>Condition Admissions:<br>Chronic Obstructive<br>Pulmonary Disease or<br>Asthma in Older<br>Adults | NQF, AHRQ<br>(Prevention Quality<br>Indicator (PQI) #5)                   | Adult                       | All discharges with an ICD-9-CM principal diagnosis code for COPD or asthma in adults ages 40 years and older, for ACO assigned or aligned Medicare fee-for-service (FFS) beneficiaries with COPD or asthma. This is an observed rate of discharges per 1,000 members.   |
| Core-11       | MSSP-20  | Mammography /<br>Breast Cancer<br>Screening   | NQF #2372, HEDIS<br>measure   | Adult                       | The percentage of women 50-74 years who had a mammogram to screen for breast cancer in the last two years.   |
| Core-12       |  | Rate of<br>Hospitalization for<br>Ambulatory Care<br>Sensitive Conditions:<br>PQI Chronic<br>Composite                    | NQF, AHRQ<br>(Prevention Quality<br>Indicator (PQI)<br>Chronic Composite) | Adult                       | Prevention Quality Indicators' (PQI) overall composite per 1,000 population, ages 18 years and older; includes admissions for one of the following conditions: diabetes with short-term complications, diabetes with long-term complications, uncontrolled diabetes without complications, diabetes with lower-extremity amputation, chronic obstructive pulmonary disease, asthma, hypertension, heart failure, angina without a cardiac procedure, dehydration, bacterial pneumonia, or urinary tract infection. |
