

Methods for Stakeholder Feedback on Blueprint Expansion

Between January and November 2022, the Executive Director for the Vermont Blueprint for Health sought feedback from various key stakeholders on current community needs and plans for Blueprint expansion as related to the [report](#) required Act 167. This stakeholder analysis included partners within all 14 Health Service Areas (HSAs) in addition to the Green Mountain Care Board, Vermont Medical Society, Board of the Vermont American Academy of Pediatrics, Bi-State Primary Care Association, Vermont Health First, Vermont Care Partners, and the Substance Use Disorder System of Care Enhancement Project. Viewpoints represented a breadth of expertise ranging from physicians, mid-level providers, and nurses, to social workers, care coordinators, community health team members, health educators, and health system leaders from a total of 30 organizations (14 hospital-affiliated practices, 9 federally qualified health centers, 7 private practices). While the majority of clinicians involved in these discussions worked in internal medicine or family practice settings, providers from 3 pediatric primary care practices were also engaged in providing stakeholder feedback. Detailed notes from each feedback session were assessed using qualitative methods and key themes were sorted according to HSA and site type. A [summary of key themes](#) across all sessions was also compiled.

Site Name	Site Type
Mt Ascutney Primary Care	Hospital-affiliated
Mt Ascutney Pediatrics	Pediatrics, Hospital-affiliated
SVMC Primary Care	Hospital-affiliated
