

Tobacco Use in Vermont:

*Discover Smoking Cessation
Best Practices & Support*

 **NOVEMBER 30 | 8:00-9:00 AM ET**

Empowering a Smoke-Free Vermont

Tobacco use remains a significant challenge for Vermonters, with 16% of adults still smoking, and a decade-low quit attempt rate at just 47%*.

Join us for our 3-part Tobacco Cessation Learning Series, presented by Healthcentric Advisors, an IPRO QIN-QIO member, and the Vermont Department of Health. In this first session, you'll uncover best practices, from medication-therapy combinations to Vermont's robust patient support programs. We'll also discuss provider reimbursement options and provide access to essential resources.

→ *Who Should Attend*

This series is intended for health, dental, and social care professionals and clinicians who might refer individuals to tobacco cessation counseling.
